

DEVELOPING AND OPERATIONALIZING THE FOUR CORE COMPONENTS OF CROSS-SECTOR ALIGNMENT

JSI

PROJECT SUMMARY

Existing multisector initiatives provide learning laboratories to investigate which combinations of actions and mechanisms lead to impact and outcomes and which do not. JSI will engage with ongoing initiatives — California

Accountable Communities for Health Initiative, Way to Wellville, and the BUILD Health Challenge — to explore how collaboratives sequence attention to the core components of aligning, how equity emerges and has been addressed over the course of developing these core components, and how leaders manage and structure a process when there are interdependent changes among the core components.
