

THE ROLE OF INTEGRATED DATA IN CROSS-SECTOR COLLABORATIONS

Urban Institute

PROJECT SUMMARY

Researchers will examine state-run administrative data systems that have been integrated across public health, health care, and human service agencies to understand their role and value in

supporting cross-sector collaboration. The evaluation will examine two states' approaches to designing, governing, implementing, and financing integrated data systems and spotlight how the data have informed decision-making and sparked policy and programmatic changes that have improved health and well-being.
