

EVALUATING SYSTEMS-ALIGNMENT INITIATIVES IN TEXAS TO TEST RWJF'S HYPOTHESIS ON THE IMPACT OF ALIGNING PUBLIC HEALTH, HEALTH CARE, AND SOCIAL SERVICES

(Texas Health Institute)

PROJECT SUMMARY

Texas Health Institute (THI) will conduct a realist evaluation of up to two dozen cross-sector initiatives occurring in Texas. This will enable a testing of the Cross-Sector Alignment Theory of Change in diverse population, geographic, and political contexts. Specifically, it will

evaluate to what extent the core components of cross-sector alignment are reflected in practice and how they vary by context, how health equity is integrated, how internal and external factors enable or inhibit alignment and adaptive actions, how these initiatives measure progress and success, and what outcomes have been achieved to date.
